Monthly Spending Calculator

Income - money that you took in this month (e.g wages, child benefit)	Amount
Example: Wages	*€1000*
Total Income	€

Expenditure - all the money you spent this month (e.g shopping, bills, take-aways)	
Total Expenditure	€

Total Income	€
Total Expenditure	€

Total Balance = Total Income - Total Expenditure	€

The total balance is what you are left with when you subtract what you've spent from the money you earned. If this seems very low, look back through your expenditure and see where you can cut back. This is the best way to monitor your spending, and make sure you have more money for the things that really matter.
